

Inspection Report

Permit Holder: Pacific Canbriam Energy Limited
Inspection: 2026-1595
Inspection Date: 2026-05-13
Inspection Outcome: Inspected

Inspection Comment:

Thanks to the Pacific Canbriam Operations Roamer for accompanying me on today's inspections. A cap is needed on the piping in the chemical tank load box so it doesn't rely on the ball valve. This was going to be attended to right away. No other concern noted during this inspection.

Observations for today's inspections for all leases;

Check all valves on the bypass piping associated with vessel PSVs. There is a ball valve plus a globe or gate valve afterwards. These appear to have non rising stems. The Operations Roamer found one of those valves in the open position as he turned the wheel to check. The ball valve was holding the gas flow in its place. The valve is now in the closed position.

Check all chemical load boxes for caps on the ends of the piping.

A satisfactory Inspection was conducted.

The following were the only items that were inspected during this Inspection and does not absolve the company of Non-Compliances which may not have been observed, nor any Non-Compliances which occur subsequent to this Inspection.
