

Inspection Report

Permit Holder: PETRONAS Energy Canada Ltd.
Inspection: 2026-1618
Inspection Date: 2026-05-14
Inspection Outcome: Inspected

Inspection Comment:

This well was not active on the day of inspection. The meter run was serviced/calibrated in September 2025. No garbage or debris was noted on the inspection.

This well was not active on the day of inspection. It last flowed in February 2026. The meter run was serviced/calibrated in September 2025. The 2 chemical tanks had their valves closed. Culvert repairs have been carried out on the main access.

Off to the left side of the lease there is a bit of a bladed trail thru the well pad regrowth. Along this trail are quite a few seeps of iron and white coloured water. These seeps come out from the edge of the originally logged lease edge and while these don't appear to be related to oil and gas operations they are exposed and flowing onto the lease perimeter. If Petronas has recently completed sampling on these seeps please send the results to the inspector upon receipt of this inspection. If this has not been completed, please conduct the sampling and send the results to the inspector by the end of the day on June 21, 2026. Thank you. A follow up inspection will be completed at a later date.

A satisfactory Inspection was conducted.

The following were the only items that were inspected during this Inspection and does not absolve the company of Non-Compliances which may not have been observed, nor any Non-Compliances which occur subsequent to this Inspection.

Permit: 100052453
Well ID: 20804
Well Name: PETRONAS ALTARES B- 022-G/094-B-08
Location: NTS: B- 022-G/094-B-08
