

Inspection Report

Permit Holder: Canadian Natural Resources Limited
Inspection: 2026-1928
Inspection Date: 2026-06-04
Inspection Outcome: Non-Compliance(s) Found

Inspection Comment:

Observations;

The Master Flo and Fisher chokes are not in the best shape as the grease zerts have been rusted closed. An example is in the a-b-36 sand filter skid where there are bubbles coming up from the valve stem, however, there are no LELs associated with this. There is an old faded tag regarding a cathodic protection deficiency from one of your service providers and I am enquiring to see if this has been corrected. The test separator meter runs are all up to date with service/calibration.

An Inspection was conducted and as a result Non-Compliance(s) were found and must be corrected. For specifics on the Non-Compliances, refer to the **Non-Compliance Notice**.

To respond to these Non-Compliances, access the CM-IS Permit Holder Application.

Consideration should be given to checking your other locations for similar Non-Compliances.

The following were the only items that were inspected during this Inspection and does not absolve the company of Non-Compliances which may not have been observed, nor any Non-Compliances which occur subsequent to this Inspection.
