

Inspection Report

Permit Holder: Canadian Natural Resources Limited

Inspection: 2026-2911

Inspection Date: 2026-08-11

Inspection Outcome: Inspected

Inspection Comment:

This lease is described as an injection site. The surface casing vent is closed on the b-4-33 well. It is understood that some surface and intermediate casing vents were being tested earlier this year. Is this particular well surface casing vent to be closed for that purpose or was it tested and the vent not opened afterwards? There is no monitoring equipment.

The flammable symbol for well c-4-33 is badly faded and a new one needs to be installed and if the well is over 10 ppm H₂S then the poisonous symbol as well.

A satisfactory inspection was conducted.

The following were the only items that were inspected during this inspection and does not absolve the company of Non-Compliances which may not have been observed, nor any Non-Compliances which occur subsequent to this inspection.
