

Inspection Report

Permit Holder: Canadian Natural Resources Limited
Inspection: 2026-2915
Inspection Date: 2026-08-11
Inspection Outcome: Non-Compliance(s) Found

Inspection Comment:

Wells are on a plunger lift system. For the suspended 16-33 well, WA28106, the surface casing vent was tested in 2026 and was found closed and needle valve installed on the gooseneck bull plugged. Should this valve be now open as there is no monitoring equipment on site?

The sign fell off it's bracket on the b-16 well head. For the same well, the green Fisher back pressure valve for the disconnected and suspended separator has a lot of crust built up around the valve stem.. It is not leaking gas or fluids but could be prone to leaking. The valve apparently passed a function test in 2026.

The surface casing vent for c-16-33 well is an audible fast bubbling and was reported to the BCER in early 2026 with a status on non serious.

There are meter runs in the group separator building that have old calibration /service tags. The meter run documentation has been identified in inspections covering the Core Road over the last 2 years. Do some of them qualify for a 5 year exemption? If so, please identify this on the service/calibration tags. Some of the orifice plate inspections are coming up to 2 years since they were last inspected. Please respond to the inspector by email. Thank you.

An Inspection was conducted and as a result Non-Compliance(s) were found and must be corrected. For specifics on the Non-Compliances, refer to the **Non-Compliance Notice**.

To respond to these Non-Compliances, access the CM-IS Permit Holder Application.

Consideration should be given to checking your other locations for similar Non-Compliances.

The following were the only items that were inspected during this Inspection and does not absolve the company of Non-Compliances which may not have been observed, nor any Non-Compliances which occur subsequent to this Inspection.
